## CURB PAVER Extrusion Type

## Model KP-40

Apollo KP-40 is a compact machine for laying concrete curb of different dimensions, through extrusion process. An automatic Sensor device provides steering and height control. Over 350 units are in operation and about 6 - 8 units are sold every month, a manifestation of customer confidence on KP-40.

The use of a zero slump concrete ensures shape true to the mould design. The concrete can be fed into the machine from a Concrete Transit Mixer or a flat bed truck (Tractor trolley) by shoveling process.
